**PETITION TO MAKE SPECIAL
UNDER 37 C.F.R. § 1.102 AND M.P.E.P. § 708.02 (VIII)**

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Dear Sir:

Applicant hereby petitions to make this application, as amended by the accompanying Preliminary Amendment, special for accelerated examination pursuant to 37 C.F.R. § 1.102(d) and M.P.E.P. § 708.02 (VIII)

Accompanying Material

Accompanying this petition is:

1. A Statement in Support of Petition to Make Special in accordance with M.P.E.P. § 708.02 (VIII)(C) and (E);
2. The fee as required by 37 C.F.R. § 1.17(h) being paid by the enclosed check in the amount of \$130.00;
3. An IDS disclosing the references found during a preliminary patentability search was filed with the application (a copy of which is attached hereto); and
4. Agreement to make an Election of a single invention.

STATEMENT IN SUPPORT OF PETITION TO MAKE SPECIAL M.P.E.P. § 708.02 (VIII) (C) and (E)

Applicant hereby requests that the above-identified patent application be made special for accelerated examination pursuant to C.F.R. § 1.102(d) and M.P.E.P. § 708.02(VIII). Applicant submits herewith a petition to make special and the fee set forth in 37 C.F.R. § 1.17(h) in accordance with M.P.E.P. § 708.02(VIII)(A).

Further, in accordance with M.P.E.P. § 708.02(VIII)(C), a pre-examination search has been made for this application. The most relevant search areas searched was U.S. Patent **Class 709, subclass 206**. Also, searches were made using the keywords: Telephone and Answering and machine and time; time-controlled and messaging.

The search resulted in discovery of the following references that are deemed most closely related to the subject matter encompassed by the claims:

Malkin et al.	6,643,684
Schiller et al.	6,442,573
Kohler	6,192,396
Henderson et al.	6,185,603
Adamczyk et al.	6,650,740

An Information Disclosure Statement has been submitted with the application that identifies and includes a copy of each of the above references, in accordance with 37 C.F.R. §1.56 and M.P.E.P. §708.02(VIII)(D).

If accelerated examination is granted, applicant agrees to make an election of a single invention without traverse if the examiner determines that all of the claims are not obviously directed to a single invention.

DETAILED DISCUSSION OF REFERENCES

In accordance with M.P.E.P. § 708.02(VIII)(E), Applicant provides the following descriptions and detailed discussion of the above-identified references, pointing out with particularity how the claimed subject matter is patentable over such references.

1. 6,643,684 Malkin et al.

The Malkin patent teaches the association of attributes (policies) to various messages for the purpose of controlling the electronic delivery and/or distribution, including the delivery time, of the associated message. In the context of Malkin, the delivery of the message is to one or more pieces of equipment (or systems) at the recipient's location. Malkin does not teach the playing, or actual displaying of the message as specifically claimed in the application

Thus, Claim 1 recites... "a clock for playing each received message at the controlled play time associated with said received message."

Claim 19 recites... "providing over an established communication connection a message playing time for a message to be played to said receiving party at said message playing time."

Claim 28 recites ... "said processor further operable for controlling the playback of said message in accordance with said attributes and wherein at least one of said attributes is a time of said playback"

Claim 37 recites ... "a clock for enabling stored ones of said messages to be played to a recipient without action on the part of said recipient"

Claim 37 further recites that additional data obtained at the time the message is played can be added to the message. Claim 44 recites ... "playing each said stored message for said

recipient at said time associated with said stored message without action taken by said recipient, at the time each said message is played.”

Malkin does not in any way teach the concepts claimed in the instant application.

2. 6,442,573 Schiller et al.

Schiller teaches the concept of downloading data directly to a display without requiring the recipient to perform a function in order to obtain the data. In Schiller, the data is stored on a server and at a preset time the display “calls” the server and the server downloads the data. As discussed above with respect to Malkin, Claims 1, 19, 28 and 44 all recite that the time for a message to be played is associated with that message. In Schiller, the time for playing the message or messages is contained in association with the message. Claim 37 does not recite that the time for the message to play is associated with the message.

However, Claim 37 also recites .. “a processor for controlling the addition of data to any stored message, said added data obtained at the time said message is played”.

Schiller does not in any manner teach the concepts claimed in the instant application.

3. 6,192,396 Kohler

Kohler teaches a messaging system where the each message can have recipient specific content. In addition, in Kohler, the viewer can set options for viewing the message. This patent is cited for background purposes only because at first reading it appeared pertinent to a claimed feature. The Kohler patent is not more relevant than the patents discussed above.

4. 6,185,603 Henderson et al.

Hendersen teaches a messaging system that uses the subject line of a message to determine where the message is to be delivered and the appearance of the message when it is delivered. As taught by Henderson, the control codes are directed to alerting messages. Henderson does not adjust the point size of the display nor do the codes change text messages to graphical messages as claimed.

5. 6,650,740 Adamczyk et al.

Adamczyk teaches a system for enabling a subscriber to reply to voice mail messages. The concept of controlling the reply to a message played for a recipient is contained in some of the dependant claims of the application as filed. The Adamczyk patent is cited for background purposes only because at first reading it appeared pertinent to a claimed feature. The Adamczyk patent is not more relevant than the patents discussed above.

6. Readers Digest Advertisement, December 2003, (obtained in late November), page 22

The advertisement is for a child's toy (pager) that contains a wireless recorder that links absent parents to their children. The parent can call the device (not specified as to how) and leave a message. The toy lights up to signify that the toy has mail. The child can then listen to the message. The toy acts as a typical answering machine would in that it accepts a message directed to it and then, on command of the recipient, it plays the message.

As discussed above, the Claims of the application call for the message to be played to the recipient without the recipient taking action or played for the recipient at a time controlled by the sender of the message.

The Readers Digest advertisement is not more pertinent to the claims than the patents discussed above.

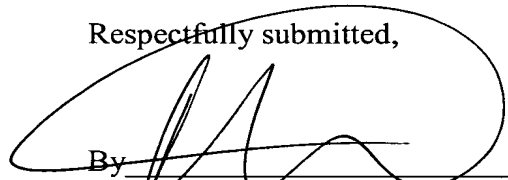

Conclusion

As shown above, there are important differences between the independent claims and the most relevant art found in Applicant's pre-examination search. Moreover, as pointed out above, a person of ordinary skill in the art considering the art found would not find these differences obvious. Accordingly, Applicant respectfully asserts that claims 1-51 are allowable over the art found in Applicant's pre-examination search. Therefore, Applicant respectfully requests that this application be granted special status for expedited prosecution and that this application be passed to issue.

Applicant respectfully requests that the Examiner call the below listed attorney if the Examiner believes that such a discussion would be helpful in resolving any remaining issues.

Dated: December 18, 2003

Respectfully submitted,

A handwritten signature in black ink, appearing to read 'David H. Tannenbaum', is written over a horizontal line. The signature is enclosed within a large, hand-drawn oval.
